A 3D bar chart titled "Progress simulation". The vertical axis (z-axis) represents progress, ranging from 0 to 1000 in increments of 200. The horizontal axis (x-axis) represents time, ranging from 0 to 200 in increments of 50. The depth axis (y-axis) represents the parameter α , ranging from 0 to 50 in increments of 5. The chart displays a series of bars for each time step, showing that progress increases over time and decreases as α increases.
