A 3D histogram plot representing particle distribution in a CMS simulation. The vertical axis (y-axis) is labeled with values 0, 50, 100, 200, 300, and 400, with a multiplier of $\times 10^3$ indicated by a superscript '3' next to the '10'. The horizontal axes (x and z) represent kinematic variables, with the x-axis ranging from 0 to 4000 and the z-axis ranging from 0 to 5. The plot shows a complex, multi-peaked structure with a primary peak at approximately (2000, 5) and several smaller peaks along the edges.
